

# Network Rail

## West Midlands Signalling Centre

flexible modular accommodation

### Brief

SiBCAS were appointed to supply and install a Modular Building as office accommodation to house Operations staff for Network Rail.

### Solution

SiBCAS worked closely with the site manager, going over every detail to ensure all their requirements were being met.

SiBCAS cleared and moved the existing containers that were already on the site. After the client visited the BBV Shenkar building SiBCAS began the project providing modular office accommodation.

We were required to provide waste solution which included septic tanks due to there being no previous connection to the foul drain.

### Challenges

SiBCAS was able to complete the project in 10 weeks, despite the fact that the project's timeline initially appeared to be somewhat challenging.

### Outcome

The modular building was successfully installed and completed on time, resulting in the consideration of a second phase due to the client being so pleased with the building. The client also contemplated purchasing the building.

### Testimonial

*"On behalf of the management at Network Rail Central Route Operations, we would like to extend our appreciation for the amazing work done on phase one of our accommodation strategy which was the installation of the large modular solution. The building will serve and provide a great working environment for our Operations staff which they greatly needed."*

*The professionalism and the endless hours that you and your team have spent since the start which was the end of January and the end being 10 weeks later have impressed the organization immensely. Thank you once again for all the effort".*
